THE TASK

Front-end JS Junior

I. The Task

Create an audio player based on attached layout.

Task details:

Audio player should have basic functions like: play/pause, previous, next, displaying playlist.

Every song should be connected with a different background. Backgrounds should cover whole screen.
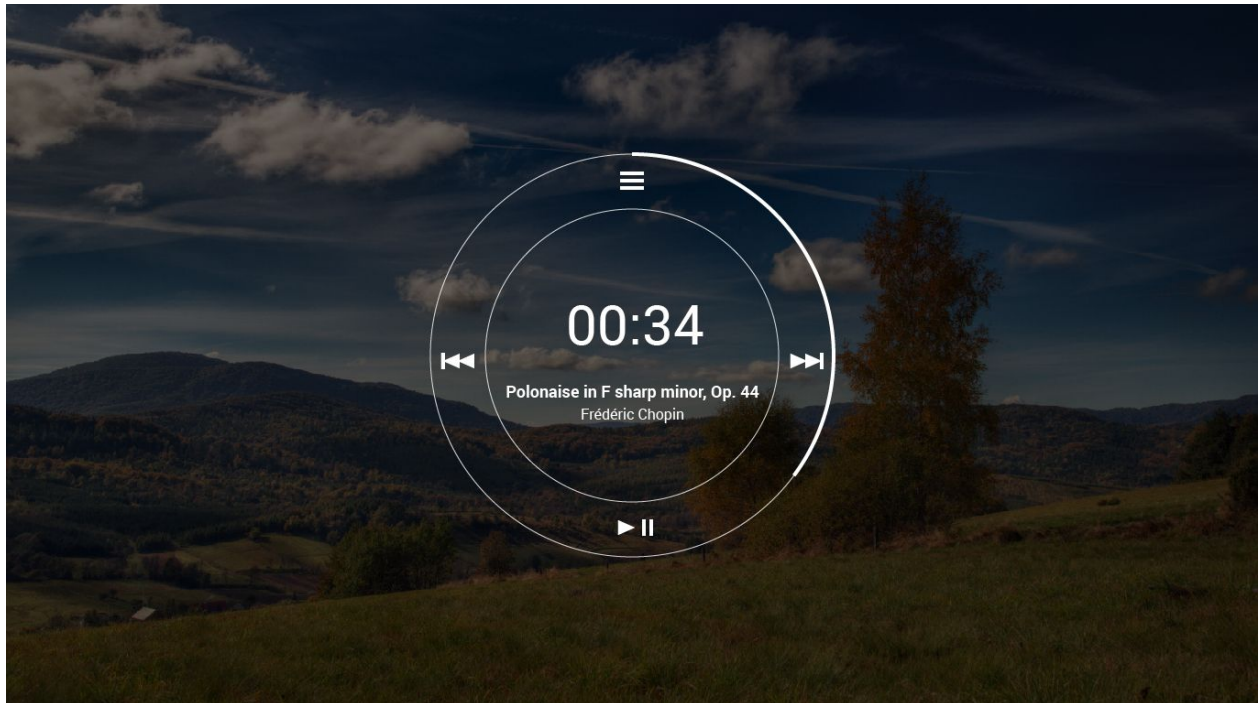

Timeline should be displayed as a circular line.

Circles morphing to playlist lines will be appreciated.

In playlist view: timeline should show current playstate, background should stay as is in current song.

All assets needed to this task you will find here.

Basic view:

Playlist view:

II. Solution Format

1. Organizers and jury reserve the right to disqualify the solution which contains **any indication of name, email, company, address or other personal information of the participant anywhere in your uploaded solution.** Jury works anonymously on participants submissions.
2. The solution should be sent in ONE archive with a title and format **ITChallenges.zip** from your profile on site.

III. Evaluation Criteria

Judges will pay attention to:

1. Code of application (structure/formatting/standards)
2. Correct user experience

You can use any third-party libraries you need, which can help you to solve this task in the best way.

IV. Contacts

1. Any questions related to the task please send to contact@itchallenges.me . We will reply asap
2. Send your solution from your profile on site no later than the **19th of February, 11:59 pm (UTC)**.
